

BHARATH M R

Software Testing Engineer

✉ bharath36527@gmail.com ☎ 9148750986 🔗 [linkedin.com/in/bharath2002](https://www.linkedin.com/in/bharath2002) 📍 Bangalore, India

Highly skilled Test Engineer with expertise in manual and automated testing using Selenium and FireFlink. Proficient in writing and executing test cases while ensuring software quality through defect tracking tools such as JIRA and Bugzilla. Passionate about enhancing software reliability by leveraging Agile methodologies. Seeking opportunities in a challenging work environment to further develop my knowledge, skills, and experience, contributing to both personal and organizational growth.

Education

B.E in Computer Science Engineer | BNM Institute of Technology | November 2020 - June 2023

- CGPA: 7.6

Diploma in Computer Science | VETBVL Polytechnic | July 2017 - October 2020

- Percentage: 82.25%

Experience

Software Test Engineer | LGSi – Bangalore, India | February 2024 - Present

As a Test Engineer with 1+ year of experience is responsible for ensuring the quality and functionality of software products through rigorous testing processes. Their role typically includes:

- Manual & Automated Testing: Executing test cases, identifying defects, and ensuring software meets requirements.
- Bug Tracking & Reporting: Using tools like JIRA or Bugzilla to log and track defects.
- Test Case Development: Writing and maintaining test cases for functional, integration, and regression testing.
- Collaboration: Working with developers and product teams to improve software quality.
- Agile Methodology: Participating in sprint planning, daily stand-ups, and retrospective meetings.

Skills

JAVA | SQL | HTML | Automation Scripting | Data Driven Testing | TestNG Framework | Test Case Writing

Soft Skills

Adaptable to the changing environment | Quick Learner | Planning Abilities | Team Work | Leadership

Certifications

SDET | Qspiders

- A Software Development Engineer in Test (SDET) certification validates expertise in both software development and testing. It equips professionals with skills in automation testing, coding, test framework development, and quality assurance.
- SDET's play a crucial role in ensuring software reliability by writing test scripts and automating test cases. The certification typically covers manual testing, automation tools (like Selenium), API testing, SQL, Agile methodologies, and defect tracking.

A+ and N+ (Basics) | Indian Institute of Hardware Technology

The A+ and N+ certifications are foundational IT certifications that validate essential technical skills:

- A+ Certification: Focuses on computer hardware, software, troubleshooting, and security. It covers topics like operating systems, networking basics, virtualization, and cloud computing. A+ is ideal for those starting a career in IT support or technical roles.

- **N+ Certification:** Specializes in networking concepts, infrastructure, protocols, and troubleshooting. It ensures professionals understand network security, configurations, and management, making it valuable for network administrators and IT professionals.

Organizations

Alpha Tech Academy | Hardware and Networking | Internship

A Hardware and Networking Internship provides hands-on experience in computer hardware, network configurations, troubleshooting, and IT infrastructure management. As an Intern I typically work on:

- **Hardware Setup & Maintenance:** Learning about computer components, assembling systems, and diagnosing hardware issues.
- **Networking Fundamentals:** Configuring routers, switches, firewalls, and LAN/WAN networks.
- **Real-World IT Operations:** Gaining exposure to enterprise-level networking and hardware management. Internship in this field helps to build a strong foundation for careers in Network administration.

Take It Smart | Full Stack Web Development | Internship

A Full Stack Web Development Internship provides hands-on experience in both front-end and back-end development, helping me to build dynamic web applications. As an Intern I typically work on:

- **Front-End Development:** Working with HTML, CSS and frameworks like React to design user interfaces.
- **Back-End Development:** Developing server-side applications using Python (Django).
- **Database Management:** Handling SQL and databases like MySQL. Internship in this field helps to build a strong foundation for my career to gain exposure to industry best practices.

Projects

Bitcoin price prediction using hybrid methodology

This project helps us to predict the price of the crypto currency with low error rate and a high precision of accuracy. The model will not tell the future, but it might forecast the general trend and the direction to expect the prices to move.

Tech Stack: Python, Flask web framework, HTML and VS Code

Agribot

This project aims to supply water when farm is dry without human presence and avoiding water wastage in irrigation process. Also monitor the rain, soil parameters like temperature, humidity and soil moisture level. This gives signals to the controller whether to send water to the field or not when the farm is dry.

Tech Stack: C++, Arduino IDE and ThingSpeak

Weather Aggregator

This project aims to collect and display real-time and forecasted weather data for the next 48 hours using external APIs. It provides the location-based hourly breakdown through a responsive web interface.

Tech Stack: Python, Django web framework, HTML, CSS and OpenWeatherMap API

Crowd beta testing

Performed crowd beta testing on various web applications.

Tech Stack: Chrome, Edge, Firefox and MS-Excel
